1. A method for improving the abrasion resistance and/or tensile strength of a durable press finished cellulosic material comprising enzymatic treatment of the durable press finished material with an enzyme capable of preventing and/or removing crosslinks from the cellulosic material.

- 2. The method of claim 1, wherein the durable press finished cellulosic material is obtained by contacting the cellulosic material with a chemical finishing agent under conditions suitable to obtain cross linking of the cellulosic material.
 - 3. The method of claim 1, wherein the cellulosic material is selected from the group consisting of cotton, viscose, rayon, ramie, linen, lyocell and mixtures thereof.
- 15 4. The method of claim 1, wherein the chemical finishing agent is selected from the group consisting of dimethynol urea, trimethyl triazine, uron, triazone, 4,5-/1,3-disubstituted ethyleneurea, polycarboxylic acids, N-substituted methyl carbamates, maleic acid (MA), itaconic acid (IA), citraconic acid, trans-aconitic acid and dimethylolethylcarbamate (DMEC).
- 5. The method of claim 4, wherein the chemical finishing agent is 4,5-dihydroxyethylene urea (DHEU), 4,5-dimethoxyethylene urea (DMEU), 1,3-dimethylol-4,5-dihydroxyethylene urea (DMDHEU), tetramethyl ether (DMDMEU) or 1,2,3,4-butanetetracarboxylic acid (BTCA).
- 25 6. The method of claim 1, wherein the enzymes are selected from the group consisting of ester hydrolases, cellulases and proteolytic enzymes.
 - 7. The method of claim 6, wherein the enzyme is a cutinase.
- 30 8. The method of claim 7, wherein the cutinase is derived from the strain *Humicula* insolens.
 - 9. The method of claim 8, wherein the cutinase is derived from the strain *Humicula* insolens DSM 1800.
 - 10. The method of claim 6, wherein the enzyme is an esterase.

WO 03/087464 PCT/US03/10399

11. The method of claim 6, wherein the cellulases is derived from a strain selected from the group consisting of *Trichoderma* and *Humicola*.

- 5 12. The method of claim 1, wherein the cross links are located on the surface of the cellulosic material.
 - 13. A composition for treating durable press finished cellulosic materials comprising at least one enzyme capable of preventing and/or removing crosslinks from the cellulosic material.
 - 14. The composition of claim 13, wherein the enzymes are selected from the group consisting of ester hydrolases, cellulases and proteolytic enzymes.
- 15. The composition of claim 14, wherein the enzyme is a cutinase.

35

- 16. The composition of claim 15, wherein the cutinase is derived from the strain Humicula insolens.
- 17. The composition of claim 16, wherein the cutinase is derived from the strain Humicula insolens DSM 1800.
 - 18. The composition of claim 14, wherein the enzyme is an esterase.
- 19. The composition of claim 14, wherein the cellulase is derived from a strain selected from the group consisting of *Trichoderma* and *Humicola*.
 - 20. A composition for treating cellulosic materials comprising at least one durable press finishing agent and at least one enzyme capable of preventing and/or removing crosslinks from the cellulosic material.
 - 21. The composition of claim 20, wherein the durable press finishing agent is selected from the group consisting of dimethynol urea, trimethyl triazine, uron, triazone, 4,5-/1,3-disubstituted ethyleneurea, polycarboxylic acids, N-substituted methyl carbamates, maleic acid (MA), itaconic acid (IA), citraconic acid, trans-aconitic acid and dimethylolethylcarbamate (DMEC).

WO 03/087464 PCT/US03/10399

22. The composition of claim 21, wherein the chemical finishing agent is 4,5-dihydroxyethylene urea (DHEU), 4,5-dimethoxyethylene urea (DMEU), 1,3-dimethylol-4,5-dihydroxyethylene urea (DMDHEU), tetramethyl ether (DMDMEU) or 1,2,3,4-butanetetracarboxylic acid (BTCA).

- 23. The composition of claim 20, wherein the enzymes are selected from the group consisting of ester hydrolases, cellulases and proteolytic enzymes.
- 10 24. The composition of claim 23, wherein the enzyme is a cutinase.
 - 25. The composition of claim 24, wherein the cutinase is derived from the strain *Humicula insolens*.
- 15 26. The composition of claim 25, wherein the cutinase is derived from the strain *Humicula insolens* DSM 1800.
 - 27. The composition of claim 23, wherein the enzyme is an esterase.
- 28. The composition of claim 23, wherein the cellulase is derived from a strain selected from the group consisting of *Trichoderma* and *Humicola*.
